PRODUCTS & SOLUTIONS

PT. NAVINDO GEOSAT is the leader in GPS based system technology in Indonesia. We are determined to bring good solutions by using global positioning system technologies.

NAVINDO provides solutions for tracking system and GIS (Geographic Information System) based on GPS (Global Positioning System) technology. A satellite-based navigation system is made up of a network of satellites which can accurately determine locations anywhere in the world.

Tracking System

On land, GPS vehicle tracking or Automatic Vehicle Location (AVL) is gaining recognition as a valuable asset for both large and small businesses. However, each vehicle tracking system is different. Each GPS vehicle tracking system is dependent on peripheral technologies that impact the performance of all GPS fleet management tracking systems. We pride ourselves in continuous development of our maps and support in order to better serve our customers.

Software Application

Navindo software can integrate a multitude of devices and assets to be viewed simultaneously.

The NAVINDO's NavTRAC system is ideally suited for large and small business, or government institutions involved in monitoring their fleet of trucks, automobiles, heavy equipment and utilities.

Web Based Application

- Multi Assets Tracking
- Configurable Report Interval
- Detailed and Accurate Digital Map
- Last Status report (location, speed, historical report)
- GPRS data transmission
- Geo-fence

Navindo provides online web based tracking system NAVWEB to enable our customers to track their fleet 24 hours from anywhere in the world through the internet.

To track your fleet and to access please login at: <http://www.navindo.net>

Personal Application

Mobile Download Application

- Map
- Last Known Status
- POI (Point of Interest)
- Interval Report

Products & Solutions

Automatic Vehicle Location

Automatic Vehicle Location or AVL is a mean for determining the geographic location of a vehicle and transmitting this information to a point where it can be used to increase efficiency. Automatic vehicle location is a powerful tool for managing fleets of vehicles, from service vehicles, emergency vehicles, construction equipment, to public transport vehicles.

Fleet Management

We help you to manage aspects related to your company's vehicle fleet from allocation of resources to fuel economies. We give you the tools to measure exactly what your vehicles and employees do throughout the day.

Heavy Equipment

We provide you with solutions to track your mobile remote assets, such as construction equipment, trailers, and portable power generators to make sure your equipments are in place before dispatching your crew. Let us help you to do more efficient project planning by scheduling equipment maintenance, fueling and transporting according to actual usage and location data.

Our Solution's Benefit

Enhanced Security

Workforce Control

- Report unauthorised use
- Fuel Theft
- Report of unauthorised stops
- Verify time sheets
- Record of stops
- Real time visibility of location and status

Improved Customer Service

Control Costs

- Reduce unnecessary mileage
- Save diesel and cut fuel bills
- Reduce mobile communication costs
